

ANTIGRAVITY

PROJECT ROADMAP 2026

A comprehensive collection of 50+ projects you can build with Google Antigravity - the agent-first AI development environment.
From beginner web apps to expert-level AI systems.

51

Projects

DIFFICULTY LEVELS

	Beginner	Perfect for newcomers
	Intermediate	Some experience needed
	Advanced	Strong fundamentals required
	Expert	Deep expertise in domain

TABLE OF CONTENTS

01. [WEB] Web Development

6 projects

Advanced / Beginner / Intermediate

02. [AI] AI & Machine Learning

6 projects

Advanced / Expert / Intermediate

03. [DATA] Data & Analytics

5 projects

Advanced / Intermediate

04. [DEV] Developer Tools & CLI

6 projects

Advanced / Beginner / Intermediate

05. [GAME] Games & Interactive

5 projects

Advanced / Beginner / Intermediate

06. [CLOUD] Cloud & DevOps

5 projects

Advanced / Expert / Intermediate

07. [APP] Mobile & PWA

5 projects

Beginner / Intermediate

08. [IOT] IoT & Hardware

4 projects

Advanced / Intermediate

09. [SEC] Security & Auth

4 projects

Advanced / Expert / Intermediate

10. [ART] Creative & Media

5 projects

Advanced / Beginner / Intermediate

HOW TO USE THIS ROADMAP

01

PICK YOUR LEVEL

Start with projects matching your skill level. Beginners start with portfolio sites or CLI tools. Work up to Expert projects.

02

OPEN ANTIGRAVITY

Launch Google Antigravity IDE and open a fresh workspace. Each project is fully self-contained.

03

DESCRIBE THE PROJECT

Paste the project description as your prompt. Antigravity will generate an implementation plan for your review.

04

APPROVE & BUILD

Review the plan, approve it, and watch the agent scaffold your entire project - code, styles, and config.

05

ITERATE & POLISH

Use follow-up prompts to refine the UI, add features, fix bugs, and deploy. The agent handles it all.

06

DEPLOY TO GITHUB

Push your finished project to GitHub. Antigravity can create repos, commit, and configure CI/CD.

Ready to build? Open Antigravity and start creating!

[WEB] Web Development

6 Projects | Build with Antigravity

#01 Personal Portfolio Website

BEGINNER

A cinematic, scroll-driven portfolio with parallax effects, glassmorphism cards, and smooth page transitions. Features dark mode, project showcases, and contact form.

STACK:

HTML

CSS

JavaScript

GSAP

Est. Time: 2-3 hours

#02 E-Commerce Storefront

ADVANCED

Full-featured online store with product catalog, cart system, Stripe checkout, admin dashboard, and order tracking. Responsive design with skeleton loaders.

STACK:

Next.js

Stripe API

PostgreSQL

Prisma

Est. Time: 8-12 hours

#03 Real-Time Chat Application

INTERMEDIATE

WebSocket-powered chat with rooms, typing indicators, message reactions, file uploads, and online presence. End-to-end encrypted messaging.

STACK:

React

Socket.io

Node.js

MongoDB

Est. Time: 5-7 hours

#04 Blog Platform with CMS

INTERMEDIATE

Markdown-based blogging platform with rich text editor, SEO optimization, RSS feeds, analytics dashboard, and comment system with moderation.

STACK:

Next.js

MDX

Supabase

Vercel

Est. Time: 4-6 hours

#05

Music Streaming App (Retrowave)

ADVANCED

Full music player with decade browsing, search, playlists, audio visualization, and streaming via YouTube Music API. Neon retrowave aesthetic.

STACK:

HTML/CSS/JS

Python Flask

yt-dlp

Web Audio API

Est. Time: 10-15 hours

#06

Recipe Sharing Platform

INTERMEDIATE

Community-driven recipe site with ingredient-based search, step-by-step instructions, nutritional info, meal planning calendar, and grocery list generator.

STACK:

React

Node.js

PostgreSQL

Cloudinary

Est. Time: 6-8 hours

[AI] AI & Machine Learning

6 Projects | Build with Antigravity

#01

Synthetic AGI Orchestrator

EXPERT

Multi-model AI synthesis engine that routes queries to GPT, Claude, and Gemini, then merges outputs for maximum accuracy. Features consensus scoring and confidence metrics.

STACK:

Python

FastAPI

OpenAI API

Anthropic API

Gemini API

Est. Time: 12-18 hours

#02

AI-Powered Code Reviewer

ADVANCED

Automated PR review bot that analyzes code quality, security vulnerabilities, performance bottlenecks, and suggests improvements using LLM reasoning.

STACK:

Python

GitHub API

Gemini API

FastAPI

Est. Time: 6-8 hours

#03

RAG Knowledge Base

ADVANCED

Retrieval-Augmented Generation system with document ingestion, vector embeddings, semantic search, and conversational Q&A with source citations.

STACK:

Python

LangChain

ChromaDB

OpenAI Embeddings

Est. Time: 5-7 hours

#04

Sentiment Analysis Dashboard

INTERMEDIATE

Real-time social media sentiment tracker with trend visualization, entity extraction, topic modeling, and alerting for brand mentions.

STACK:

Python

HuggingFace

Streamlit

Twitter API

Est. Time: 4-6 hours

#05

AI Image Generator & Editor

ADVANCED

Text-to-image generation interface with inpainting, outpainting, style transfer, and prompt engineering presets. Gallery with favorites and sharing.

STACK:

React

Stable Diffusion API

Node.js

S3

Est. Time: 8-10 hours

#06

Intelligent Resume Builder

INTERMEDIATE

AI-powered resume creator that analyzes job descriptions, suggests bullet points, optimizes for ATS, and generates multiple format exports (PDF, DOCX).

STACK:

Next.js

OpenAI API

Puppeteer

PostgreSQL

Est. Time: 5-7 hours

[DATA] Data & Analytics

5 Projects | Build with Antigravity

#01 IPL Match Predictor

ADVANCED

Data-driven sports prediction engine using historical stats, player form, venue analysis, and ensemble ML models. Live leaderboard and prediction accuracy tracking.

STACK:

Python

Pandas

Scikit-learn

React

D3.js

Est. Time: 10-14 hours

#02 Finance Tracker Dashboard

INTERMEDIATE

Personal finance manager with bank sync, expense categorization, budget alerts, investment tracking, and interactive charts with drill-down capability.

STACK:

React

Chart.js

Node.js

Plaid API

Est. Time: 6-8 hours

#03 COVID/Health Data Visualizer

INTERMEDIATE

Interactive choropleth maps and time-series charts for health data exploration. Supports custom dataset uploads and comparison views.

STACK:

D3.js

Mapbox

Python Flask

Pandas

Est. Time: 4-6 hours

#04 GitHub Analytics Dashboard

INTERMEDIATE

Visualize your coding activity - commit heatmaps, language breakdowns, PR metrics, contribution streaks, and repository health scores.

STACK:

Next.js

GitHub GraphQL API

Recharts

Vercel

Est. Time: 4-5 hours

#05

Real-Time Stock Screener

ADVANCED

Live stock data with technical indicators, candlestick charts, watchlists, alerts, and fundamental analysis filters. Paper trading simulator included.

STACK:

React

WebSocket

Alpha Vantage API

TradingView

Est. Time: 8-10 hours

[DEV] Developer Tools & CLI

6 Projects | Build with Antigravity

#01

CLI Task Manager (Taskforge)

BEGINNER

Terminal-based project management with Kanban boards, time tracking, git integration, priority sorting, and Pomodoro timer. Syncs to cloud.

STACK:

Python

Rich

Click

SQLite

Est. Time: 3-4 hours

#02

API Mock Server Generator

INTERMEDIATE

Auto-generate realistic mock APIs from OpenAPI/Swagger specs with faker-powered data, latency simulation, and error scenario testing.

STACK:

Node.js

Express

Faker.js

YAML

Est. Time: 3-5 hours

#03

Code Snippet Manager

INTERMEDIATE

Searchable, tagged code snippet library with syntax highlighting, multi-language support, VS Code extension integration, and team sharing.

STACK:

Electron

React

SQLite

Prism.js

Est. Time: 5-7 hours

#04

Log Analyzer & Visualizer

ADVANCED

Parse, filter, and visualize application logs with pattern detection, error clustering, timeline views, and alert rule configuration.

STACK:

Python

Elasticsearch

Kibana

FastAPI

Est. Time: 6-8 hours

#05

Database Schema Designer

ADVANCED

Visual ERD builder with drag-and-drop tables, relationship mapping, SQL/migration export, and schema versioning. Supports PostgreSQL, MySQL, SQLite.

STACK:

React

Canvas API

Node.js

SQL Generator

Est. Time: 8-10 hours

#06

Regex Pattern Playground

BEGINNER

Interactive regex tester with real-time matching, group highlighting, cheat sheet, pattern library, and explanation mode that breaks down complex patterns.

STACK:

HTML

CSS

JavaScript

Web Workers

Est. Time: 2-3 hours

[GAME] Games & Interactive

5 Projects | Build with Antigravity

#01

Multiplayer Trivia Game

INTERMEDIATE

Real-time multiplayer quiz with room codes, live leaderboard, power-ups, custom question packs, and spectator mode. Smooth animations throughout.

STACK:

React

Socket.io

Node.js

Redis

Est. Time: 6-8 hours

#02

2D Platformer (Pixel Quest)

INTERMEDIATE

Retro pixel-art platformer with physics engine, level editor, collectibles, enemies with AI pathfinding, and local high-score board.

STACK:

HTML5 Canvas

JavaScript

Web Audio API

Est. Time: 8-10 hours

#03

Chess Engine with AI

ADVANCED

Fully playable chess with drag-and-drop, move validation, AI opponent (minimax + alpha-beta pruning), game history, and PGN export.

STACK:

JavaScript

Canvas/SVG

Web Workers

Est. Time: 10-14 hours

#04

Interactive Data Story

INTERMEDIATE

Scroll-driven narrative visualization combining data journalism with interactive charts. Readers explore data by scrolling through animated story chapters.

STACK:

D3.js

ScrollTrigger

GSAP

HTML/CSS

Est. Time: 5-7 hours

#05

Typing Speed Racer

BEGINNER

Competitive typing game with WPM tracking, accuracy stats, multiplayer races, difficulty levels, and progression system with achievements.

STACK:

React

WebSocket

Node.js

MongoDB

Est. Time: 3-4 hours

[CLOUD] Cloud & DevOps

5 Projects | Build with Antigravity

#01

CI/CD Pipeline Dashboard

ADVANCED

Unified view of all CI/CD pipelines across GitHub Actions, GitLab CI, and Jenkins. Build status, deployment history, rollback controls, and Slack notifications.

STACK:

Next.js

GitHub API

Docker

WebSocket

Est. Time: 8-10 hours

#02

Container Orchestration Monitor

EXPERT

Real-time Kubernetes cluster dashboard with pod status, resource utilization, log streaming, and auto-scaling visualizations.

STACK:

React

Kubernetes API

Grafana

Prometheus

Est. Time: 12-16 hours

#03

Serverless Function Deployer

ADVANCED

One-click serverless function deployment tool with code editor, environment variables manager, cold-start metrics, and execution logs.

STACK:

Next.js

AWS Lambda

Vercel Functions

Monaco Editor

Est. Time: 6-8 hours

#04

Infrastructure Cost Calculator

INTERMEDIATE

Estimate and compare cloud costs across AWS, GCP, and Azure. Save configurations, forecast spend, and get optimization recommendations.

STACK:

React

Cloud Pricing APIs

Chart.js

Node.js

Est. Time: 5-7 hours

#05

Uptime Monitor & Status Page

INTERMEDIATE

Monitor website/API health with ping checks, latency tracking, incident management, and a public status page. Email/SMS alerting on downtime.

STACK:

Node.js

Cron

PostgreSQL

React

Twilio

Est. Time: 5-7 hours

[APP] Mobile & PWA

5 Projects | Build with Antigravity

#01

Habit Tracker PWA

INTERMEDIATE

Offline-first habit tracking app with streak counting, heatmap calendar, push notifications, weekly reports, and motivational quotes.

STACK:

React

Service Workers

IndexedDB

Web Push API

Est. Time: 4-6 hours

#02

Expense Splitter (SplitEase)

INTERMEDIATE

Group expense splitting with real-time balance calculation, payment integration, receipt scanning (OCR), and settlement suggestions.

STACK:

React Native / PWA

Node.js

Tesseract.js

Stripe

Est. Time: 5-7 hours

#03

Workout & Fitness Logger

BEGINNER

Exercise tracking with custom routines, progress charts, rest timers, PR tracking, and body measurement logs. Works offline.

STACK:

PWA

IndexedDB

Chart.js

Service Workers

Est. Time: 3-5 hours

#04

QR Code Generator & Scanner

BEGINNER

Generate styled QR codes with logos, colors, and shapes. Scan QR codes via camera with history and batch generation support.

STACK:

React

qrcode.js

WebRTC Camera API

Canvas

Est. Time: 2-3 hours

#05

Offline Notes App (Notecraft)

INTERMEDIATE

Rich-text note-taking with folders, tags, search, markdown support, and cloud sync when online. Dark mode and focus mode included.

STACK:

PWA

Tiptap Editor

IndexedDB

CRDTs

Est. Time: 5-7 hours

[IOT] IoT & Hardware

4 Projects | Build with Antigravity

#01 Smart Attendance System (RFID)

ADVANCED

IoT attendance tracker using RFID tags with ESP32, real-time cloud sync, admin dashboard, attendance reports, and late-arrival alerts.

STACK:

Arduino/ESP32

MQTT

Node.js

React Dashboard

Est. Time: 8-12 hours

#02 Home Environment Monitor

INTERMEDIATE

Temperature, humidity, and air quality monitoring with historical charts, threshold alerts, and smart device integration via MQTT.

STACK:

ESP32

DHT22/BME280

InfluxDB

Grafana

Est. Time: 4-6 hours

#03 Plant Watering Automation

INTERMEDIATE

Soil moisture monitoring with automated watering schedule, camera feed for plant health, and mobile notifications when plants need attention.

STACK:

Raspberry Pi

Soil Sensor

Python

Telegram Bot

Est. Time: 4-6 hours

#04 Smart Door Lock System

ADVANCED

NFC/PIN-based door lock with access logs, remote unlock via app, visitor management, and emergency override. Secure BLE communication.

STACK:

ESP32

NFC Module

React Native

Firebase

Est. Time: 10-14 hours

[SEC] Security & Auth

4 Projects | Build with Antigravity

#01 OAuth2 Authentication Service

ADVANCED

Full OAuth2/OIDC provider with Google/GitHub social login, JWT tokens, refresh rotation, RBAC, and 2FA (TOTP). Production-grade security.

STACK:

Node.js

Passport.js

JWT

PostgreSQL

Redis

Est. Time: 6-8 hours

#02 Password Manager (Vault)

EXPERT

Encrypted password vault with AES-256, master password derivation (Argon2), browser extension, auto-fill, and secure sharing.

STACK:

Electron

React

Node.js

Crypto APIs

Est. Time: 12-16 hours

#03 Vulnerability Scanner

EXPERT

Automated security scanner for web apps - checks for XSS, SQLi, CSRF, misconfigurations, and generates detailed remediation reports.

STACK:

Python

Scrapy

Beautiful Soup

FastAPI

Est. Time: 10-14 hours

#04 Rate Limiter & API Gateway

INTERMEDIATE

Configurable API gateway with rate limiting, IP whitelisting, request logging, abuse detection, and real-time traffic analytics.

STACK:

Node.js

Redis

Express

React Dashboard

Est. Time: 4-6 hours

[ART] Creative & Media

5 Projects | Build with Antigravity

#01

Collaborative Whiteboard

ADVANCED

Real-time drawing canvas with layers, shapes, text, image upload, undo/redo, and multi-user collaboration via WebRTC.

STACK:

React

Canvas API

WebRTC

Socket.io

Est. Time: 8-10 hours

#02

Meme Generator Studio

BEGINNER

Drag-and-drop meme editor with template library, custom text styling, image filters, GIF export, and trending meme feed.

STACK:

React

Canvas API

Cloudinary

Node.js

Est. Time: 3-4 hours

#03

Podcast Hosting Platform

ADVANCED

Upload, host, and distribute podcasts with RSS feed generation, episode analytics, embedded player widget, and AI-generated transcripts.

STACK:

Next.js

AWS S3

Whisper API

PostgreSQL

Est. Time: 10-14 hours

#04

Color Palette Generator

BEGINNER

AI-driven color palette generator from images or moods. Includes contrast checker, CSS/Tailwind export, palette saving, and accessibility scoring.

STACK:

React

Canvas API

Color Theory Algorithms

Est. Time: 2-3 hours

#05

Video Thumbnail Maker

INTERMEDIATE

Template-based thumbnail designer with text overlays, background remover, batch export, and integration with YouTube to auto-suggest styles.

STACK:

React

Canvas API

Remove.bg API

Node.js

Est. Time: 4-6 hours

PROJECT SUMMARY

CATEGORY	PROJECTS	DIFFICULTY	EST. TIME
Web Development	6	Intermediate	36+ hrs
AI & Machine Learning	6	Advanced	36+ hrs
Data & Analytics	5	Intermediate	30+ hrs
Developer Tools & CLI	6	Intermediate	36+ hrs
Games & Interactive	5	Intermediate	30+ hrs
Cloud & DevOps	5	Advanced	30+ hrs
Mobile & PWA	5	Intermediate	30+ hrs
IoT & Hardware	4	Intermediate	24+ hrs
Security & Auth	4	Expert	24+ hrs
Creative & Media	5	Advanced	30+ hrs
TOTAL	51	All Levels	300+ hrs

ABOUT ANTIGRAVITY

Google Antigravity is an agent-first integrated development environment (IDE) built by Google DeepMind. Unlike traditional AI coding assistants, Antigravity treats AI agents as autonomous collaborators that can plan, execute, and verify complex end-to-end tasks across your editor, terminal, and a live browser.

Key capabilities:

- Autonomous end-to-end code generation and execution
- Multi-model support (Gemini, Claude, GPT)
- Integrated browser for UI testing and validation
- Artifact-based communication (plans, tasks, walkthroughs)
- Knowledge base that learns from your interactions

Every project in this roadmap can be built entirely within Antigravity, from initial planning to deployment, using natural language instructions.
